1. Project Overview

1.1 Business Goals

Eunice Nails is being built as a premium direct-to-consumer ecommerce platform for press-on nails and nail accessories, positioned to serve both individual buyers and bulk purchasers in the fashion and beauty supply chain.

The platform should:

- Drive online sales of press-on nail sets, nail care accessories, and related beauty products.
- Establish Eunice Nails as a recognisable brand in the African and international nail fashion space.
- Reduce customer service load through an always-on AI agent that handles product questions, order tracking, sizing, and basic complaints.
- Build a repeat-customer base through accounts, wishlists, and loyalty features.
- Enable B2B wholesale orders for fashion companies and resellers.

1.2 User Goals

User Type	Primary Goal
Retail Customer	Browse, find a style she loves, purchase quickly, track delivery
Bulk Buyer / Reseller	Find wholesale pricing, place large orders, get invoices
First-Time Visitor	Understand the brand, see social proof, feel confident buying
Returning Customer	Re-order favourites, redeem loyalty, manage account
Fashion Company Buyer	Find suitable styles, request quote or partnership

1.3 Problems the Website Solves

- Lack of a polished, trustworthy online presence for premium press-on nails in the target market.
- Customer service bottlenecks during peak shopping periods.
- High cart abandonment caused by friction in checkout and payment.
- Difficulty for international buyers in finding reliable shipping and payment options.
- Limited reach for the brand beyond informal social channels (Instagram, WhatsApp).

1.4 Core Objectives

- Build a fast, mobile-first storefront optimised for conversion.
- Integrate a multi-channel payment system supporting cards, Apple Pay, and local payment rails.

- Deploy an AI customer service agent capable of handling 70 to 80 percent of routine support queries.
 - Provide an admin dashboard for inventory, orders, customers, and revenue insight.
 - Lay the foundation for future scaling into adjacent product lines and markets.
-

2. Brand Direction

2.1 Color Palette

The brand should feel feminine, luxurious, and clean. Inspired by the muted, editorial tone of deedee.co, the palette should avoid loud or saturated colors and lean into warm neutrals with a single rich accent.

Role	Color Name	Hex
Primary Background	Soft Ivory	#FAF7F2
Secondary Background	Warm Cream	#F1ECE4
Primary Text	Deep Charcoal	#1A1A1A
Accent (Brand)	Rose Nude	#C9A28A
Accent (Highlight)	Burnt Mocha	#6B4A38
Success	Sage Green	#7A8B6F
Error	Muted Rust	#B5483A

2.2 Typography

Use	Suggested Font	Notes
Display / Headings	Canela or Editorial New	Serif, editorial, fashion-forward
Body	Inter or Söhne	Clean, modern sans-serif
Accent / Quotes	Italic serif variant	For testimonials and pull quotes

Typographic hierarchy should rely on size and weight rather than color, keeping the design quiet and confident.

2.3 UI Style Direction

- Generous whitespace, asymmetrical product layouts, and editorial photography.
- Soft rounded corners on inputs and cards (8 to 12px radius).
- Thin borders rather than heavy shadows.
- Photography-first hero sections with overlaid type.
- Subtle hover states, no aggressive animations.

2.4 Mood and Visual Identity

The brand voice is calm, confident, and modern. Visually it should feel closer to a beauty editorial than a typical ecommerce store. Think clean magazine layouts, soft daylight product photography, and minimal

but considered typography.

3. Website Structure

3.1 Sitemap

- Home
 - Shop
 - All Nails
 - New Arrivals
 - Best Sellers
 - By Length (Short / Medium / Long / Extra Long)
 - By Shape (Almond / Coffin / Square / Stiletto)
 - By Style (Classic / Bridal / Editorial / Seasonal)
 - Accessories (Glue, Files, Kits)
 - Collections
 - [Dynamic collection pages]
 - Wholesale / B2B
 - About
 - Journal (Blog)
 - Contact
 - Account
 - Login / Signup
 - Orders

 - Checkout
 - Help Center
 - FAQ
 - Shipping
 - Returns
 - Sizing Guide

3.2 Required Pages

Page	Purpose
Home	Brand introduction, featured collections, social proof
Product Listing	Browse and filter products
Product Detail	Full product info, sizing, reviews, purchase
Cart	Review items before checkout
Checkout	Capture shipping, payment, and confirm
Order Confirmation	Confirm purchase, set expectations
Account Dashboard	Manage user data, view orders
Wishlist	Save items for later
Wholesale	B2B inquiry and bulk ordering

Page	Purpose
About	Brand story, founder, mission
Journal	SEO content and brand storytelling
Help Center	Self-service support
Contact	Direct inquiries, fallback from AI agent
Legal	Privacy, Terms, Refund Policy

3.3 Navigation Structure

Top Navigation (Desktop):

Logo | Shop | Collections | Wholesale | About | Journal | Search | Account | Cart

Mobile Navigation:

Hamburger menu with accordion sections, sticky cart icon, and a bottom-anchored quick action bar (Search, Wishlist, Account, Cart).

3.4 Footer Structure

Four-column layout on desktop, stacked on mobile:

Column 1: Shop	Column 2: Help	Column 3: Company	Column 4: Stay Connected
New Arrivals	FAQ	About	Newsletter signup
Best Sellers	Shipping	Journal	Instagram
Wholesale	Returns	Contact	TikTok
Gift Cards	Sizing Guide	Careers	WhatsApp

Bottom strip: copyright, payment method icons, language and currency switcher, social links.

4. User Interface Description

4.1 Header

- Slim top announcement bar (free shipping threshold, current promo).
- Main header with logo centered on mobile, left-aligned on desktop.
- Sticky on scroll with reduced height.
- Cart icon with live item count badge.
- Search opens a full-width overlay with predictive results.

4.2 Hero Section (Home)

- Full-bleed editorial image or short looping video (muted, autoplay, 6 to 10 seconds).
- Overlay headline in serif display font.
- Primary CTA: "Shop New Arrivals".
- Secondary CTA: "Explore Collections".
- Scroll indicator at the bottom.

4.3 Buttons

Type	Style
Primary	Solid charcoal background, ivory text, 12px radius
Secondary	Transparent with charcoal border
Tertiary	Text-only with underline on hover
Destructive	Muted rust background, ivory text

Hover states: subtle scale (1.02) and slight darken. All buttons must have a visible focus ring for accessibility.

4.4 Cards

Product Card:

- Image (4:5 aspect ratio).
- Quick-view icon on hover.
- Product name, price, and color swatches.
- "Add to Wishlist" heart icon top-right.
- Tag pill for "New", "Bestseller", or "Low Stock".

Collection Card:

- Larger image, overlaid title, hover zoom effect.

4.5 Forms

- Inputs use floating labels.
- Inline validation with subtle color feedback.
- Error messages appear below the input in muted rust.
- All forms must support autofill and password manager integration.

4.6 Testimonials

- Slider with three visible cards on desktop, one on mobile.
- Each card shows: customer photo or initials, name, rating, short review, and product purchased.
- Pulled live from verified reviews in the database.

4.7 Pricing Sections

The retail store uses straightforward unit pricing. Wholesale pricing requires:

- Tiered pricing table (5 to 19 units, 20 to 49 units, 50 plus).
- Volume discount badges.
- "Request Quote" CTA for orders above a defined threshold.

4.8 Dashboard Layout

Customer Dashboard:

Left sidebar navigation, main content area, sticky header with account name and logout. Sections include Orders, Wishlist, Addresses, Loyalty, and Settings.

Admin Dashboard:

Covered in detail in Section 10.

4.9 Mobile Responsiveness

- Mobile-first design.
- Bottom navigation bar with key actions.
- Product image galleries swipe horizontally.
- Filters open as a full-screen drawer.
- Checkout collapses into a single scrollable flow.

4.10 Animations and Interactions

- Page transitions: fade plus subtle slide (200 to 300ms).

- Image hover: scale 1.03 with 400ms ease-out.
 - Add-to-cart: small badge bounce and toast notification.
 - Scroll-triggered fade-in on hero and section reveals.
 - All animations respect `prefers-reduced-motion`.
-

5. User Experience

5.1 Primary User Flow

Landing → Browse Shop → Product Detail → Add to Cart → Checkout → Payment → Confirmation → Account Created → Order Tracking → Repeat Purchase

5.2 Customer Journey

Stage	Touchpoint	Goal
Awareness	Instagram, TikTok, Google	Click through to site
Discovery	Home, Shop, Journal	Find styles they like
Consideration	Product detail, reviews, AI chat	Resolve doubts
Purchase	Cart, checkout	Complete transaction
Post-purchase	Email, account, AI agent	Track and re-engage
Loyalty	Account, promotions, referrals	Return and advocate

5.3 CTA Placements

- Above the fold on every key page.
- Sticky CTA on mobile product pages ("Add to Cart").
- Exit-intent overlay on first visit (newsletter signup with discount).
- AI agent floating button bottom-right on all pages.

5.4 Accessibility Considerations

- WCAG 2.1 AA compliance target.
- Color contrast ratio of at least 4.5:1 for body text.
- All interactive elements keyboard-navigable.
- Skip-to-content link on every page.
- Alt text for all product and editorial images.
- ARIA labels on icon buttons and form controls.
- Captions on any video content.

5.5 Mobile-First Experience

- Touch targets minimum 44 by 44 pixels.
- Forms use appropriate keyboard types (numeric for card, email for email).
- One-tap payment options (Apple Pay, Google Pay) prioritised in checkout.

- AI chat opens as a bottom sheet on mobile, not a full overlay.

6. Features Documentation

6.1 Product Catalog

What it does: Displays all available products with rich filtering and sorting.

Why it exists: The catalog is the heart of the storefront. It needs to make discovery easy and confidence-building.

User interaction: Browse, filter by length, shape, color, occasion, and price. Sort by newest, popular, price.

Frontend behavior: Infinite scroll with skeleton loaders. Filters update URL parameters for shareable links. Lazy-loaded images.

Backend logic: Query database with filter parameters, return paginated results. Cache popular queries in Redis.

API requirements:

- GET `/api/products` with query params (filter, sort, page).
- GET `/api/products/{slug}` for product detail.
- GET `/api/collections/{slug}/products` for collection pages.

Database requirements:

- `products` table: id, slug, name, description, base_price, status, created_at, updated_at.
- `product_variants` table: id, product_id, sku, length, shape, color, stock, price.
- `product_images` table: id, product_id, url, alt_text, position.
- `collections` table and `collection_products` join table.

6.2 Cart and Checkout

What it does: Allows users to gather items and complete purchase.

Why it exists: Conversion endpoint.

User interaction: Add to cart from product or quick view, edit quantities in cart, proceed through three-step checkout (Contact, Shipping, Payment).

Frontend behavior: Cart persists across sessions via local storage for guests, database for logged-in users. Checkout uses a single-page progressive flow.

Backend logic: Cart state synced via API. On checkout, server validates stock, calculates totals (subtotal, shipping, tax), and creates a pending order. Payment confirmation triggers fulfillment workflow.

API requirements:

- GET/POST/PATCH/DELETE /api/cart
- POST /api/checkout/initiate
- POST /api/checkout/complete
- POST /api/orders/webhook for payment events.

Database requirements:

- carts and cart_items tables.
- orders and order_items tables.
- addresses table linked to user and order.

6.3 Wishlist

What it does: Lets users save items for later.

User interaction: Tap heart icon on product card or detail page. View saved items in account.

Backend logic: Guest wishlists stored in local storage. Logged-in wishlists synced to database.

Database requirements: wishlists table: id, user_id, product_id, added_at.

6.4 Reviews and Ratings

What it does: Collects and displays verified customer reviews.

User interaction: Submit review after delivery, optionally with photo. Browse reviews on product page with filtering by star rating.

Backend logic: Only orders marked delivered can submit reviews. Moderation queue for new submissions.

API requirements:

- GET /api/products/{id}/reviews
- POST /api/reviews (authenticated, post-delivery only).

Database requirements: reviews table: id, product_id, user_id, order_id, rating, title, body, photos, verified, status, created_at.

6.5 Search

What it does: Lets users find products by name, attribute, or natural language.

User interaction: Type in search bar, see predictive suggestions, view results page.

Backend logic: Use Elasticsearch, Algolia, or Meilisearch for fast indexed search. Optionally augment with vector search for natural language queries.

6.6 Wholesale Inquiry

What it does: Captures B2B leads.

User interaction: Fill form with company info, expected order volume, and product interest.

Backend logic: Submission creates a lead in the database and notifies sales team via email and admin dashboard.

7. Authentication System

7.1 Signup and Login

- Email and password.
- Phone number (OTP) as an alternative.
- Social login: Google, Apple.
- Guest checkout permitted with optional account creation after purchase.

7.2 Google Login

Implemented via OAuth 2.0. On first login, the system creates a user record using the Google profile (email, name, avatar) and skips password creation.

7.3 Password Reset

- "Forgot password" link on login page.
- User enters email, receives a time-limited reset link (valid 30 minutes).
- Link routes to a reset form, which updates the password and invalidates all existing sessions.

7.4 User Roles

Role	Permissions
Guest	Browse, add to cart, checkout as guest
Customer	All guest abilities plus account, wishlist, reviews, order history
Wholesale	Customer abilities plus wholesale pricing and bulk order form
Support Agent	Read access to orders and customer data, AI agent oversight
Content Editor	Manage journal posts, collections, banners
Admin	Full access to all features and settings

7.5 Admin Access

- Separate admin portal at `/admin`.
- Mandatory two-factor authentication.
- Session timeout after 30 minutes of inactivity.
- All admin actions logged in an audit trail.

8. Payment System

8.1 Payment Flow

Cart → Checkout → Contact Info → Shipping Address →
Shipping Method → Payment Method → Review →
Pay → Webhook → Order Confirmed → Email Receipt

8.2 Payment Gateways

Based on the reference image (Visa, Mastercard, AMEX, JCB, UnionPay, Discover, Apple Pay), the platform should support:

Method	Provider	Region
Cards (Visa, Mastercard, AMEX, Discover, JCB, UnionPay)	Stripe, Shopify Payments, or Paystack	Global
Apple Pay	Stripe / native	Global
Google Pay	Stripe / native	Global
Paystack	Paystack	Nigeria, Ghana, South Africa
Flutterwave	Flutterwave	Africa-wide
Bank Transfer	Manual confirmation	Nigeria
PayPal	PayPal	International

Currency switching should be automatic based on geolocation, with manual override.

8.3 Invoices

- Auto-generated PDF invoice on successful payment.
- Sent via email and accessible in the customer account.
- Wholesale orders include VAT and structured billing info.

8.4 Wallet and Payment History

- All transactions visible in the customer dashboard.
- Filters by status (paid, refunded, failed) and date.
- Each transaction links to the order and invoice.

8.5 Failed Payment Handling

- Show clear inline error with retry option.
- Save the cart so the customer does not lose progress.

- Send a follow-up email with a one-click resume link valid for 24 hours.
 - For repeated failures, AI agent proactively offers help.
-

9. AI Features

9.1 AI Customer Service Agent

What it does: Handles inbound customer support inquiries in natural language.

Why it exists: Reduces support cost, provides 24/7 coverage, scales as the business grows.

Capabilities:

- Answer product questions (sizing, application, durability).
- Look up order status given email or order number.
- Initiate returns and provide return instructions.
- Recommend products based on stated preferences.
- Escalate to a human agent when confidence is low or the customer requests it.

User interaction: Floating chat button on every page. Opens as a side panel on desktop, bottom sheet on mobile.

Frontend behavior: Streaming responses, typing indicator, suggested quick replies, smooth handoff to human via email or WhatsApp when needed.

Backend logic:

- Multi-turn conversation managed by LangGraph or a similar orchestration layer.
- RAG pipeline over product catalog, FAQ, shipping policies, and order data.
- Tool use for order lookup, return creation, and stock checks.
- Guardrails to prevent the agent from making promises about pricing, discounts, or delivery dates without verification.

API requirements:

- `POST /api/ai/chat` (streaming).
- Internal tool endpoints: `GET /api/internal/order/{id}`, `POST /api/internal/return/initiate`.

Database requirements:

- `ai_conversations` table: `id`, `user_id` (nullable), `started_at`, `status`, `escalated`.
- `ai_messages` table: `id`, `conversation_id`, `role`, `content`, `metadata`, `created_at`.

9.2 AI Assistant Features

- Style recommender: short questionnaire on the home page suggests products based on occasion, length preference, and aesthetic.
- Sizing helper: walks the user through measuring their nail bed.
- Restock alert: AI watches for items the user has favoured and alerts when back in stock.

9.3 Automation Features

- AI-generated product descriptions reviewed by a human editor before publishing.
- Automated abandoned cart sequences personalised by the AI based on items in the cart.
- AI-tagged reviews for sentiment monitoring.

9.4 AI Workflow Logic

User message → Intent classification →
Route to appropriate agent (FAQ / Order / Sales / Returns) →
Retrieve context (RAG over catalog and policies) →
Generate response with tool calls if needed →
Stream to user → Log conversation →
Trigger escalation if confidence below threshold

9.5 AI Integrations and APIs

Component	Suggested Provider
LLM	OpenAI GPT-4o or Anthropic Claude
Orchestration	LangGraph
Vector Store	pgvector on PostgreSQL or Pinecone
Embeddings	OpenAI text-embedding-3-small
Speech (future)	ElevenLabs or OpenAI
Translation (future)	DeepL

10. Admin Dashboard

10.1 Analytics

- Revenue (today, week, month, year) with comparison to previous period.
- Orders by status (pending, paid, fulfilled, delivered, returned).
- Top-selling products and collections.
- Conversion funnel: visit, add-to-cart, checkout initiated, completed.
- AI agent performance: total conversations, resolution rate, escalation rate, satisfaction.
- Traffic sources via Google Analytics integration.

10.2 User Management

- Searchable list of all users with filters by role, location, and order count.
- View user profile with order history, lifetime value, and AI conversation history.
- Manual role assignment.
- Ability to issue store credit or refunds.

10.3 Content Management

- Product creation and editing with variant management.
- Collection management with drag-and-drop ordering.
- Journal (blog) editor with rich-text and image upload.
- Banner and promotion scheduling.
- SEO fields (meta title, meta description, OG image) on every content type.

10.4 Financial Overview

- Daily, weekly, and monthly revenue dashboards.
- Payout reconciliation with payment providers.
- Refunds and chargebacks log.
- Wholesale invoices and outstanding balances.
- Export to CSV for accounting.

10.5 Notifications

- New orders.
- Low stock alerts.
- New wholesale inquiries.
- AI escalations to human.
- Failed payments.

- Negative reviews.

Delivered via email, in-dashboard, and optionally Slack or WhatsApp.

10.6 Settings

- Store details (name, currency, timezone).
 - Shipping zones and rates.
 - Tax configuration.
 - Payment provider keys (encrypted).
 - AI agent configuration (system prompt, guardrails, escalation thresholds).
 - Team and roles.
 - Integrations (email, social, CRM).
-

11. Technical Requirements

11.1 Recommended Frontend Stack

Layer	Choice
Framework	Next.js 14+ (App Router)
Language	TypeScript
Styling	Tailwind CSS with shadcn/ui components
State	Zustand or React Query
Forms	React Hook Form plus Zod
Animations	Framer Motion

11.2 Backend Stack

Layer	Choice
Framework	FastAPI (Python) or NestJS (Node)
Auth	Auth.js / NextAuth or custom JWT with refresh tokens
Background Jobs	Celery (Python) or BullMQ (Node)
AI Orchestration	LangGraph
Caching	Redis

Given Destiny's existing stack (Python, FastAPI, LangGraph, Redis, PostgreSQL, Docker), FastAPI is the natural choice and aligns with the AI agent requirements.

11.3 Database

- **Primary:** PostgreSQL (with pgvector extension for AI memory and product embeddings).
- **Cache:** Redis.
- **Search:** Meilisearch or Algolia.
- **File Storage:** AWS S3 or Cloudflare R2 for product images and invoices.

11.4 Hosting

Component	Suggested Host
Frontend	Vercel
Backend	Render, Railway, or AWS ECS

Component	Suggested Host
Database	Supabase, Neon, or DigitalOcean Managed PostgreSQL
Object Storage	Cloudflare R2 or AWS S3
CDN	Cloudflare

11.5 Security Requirements

- HTTPS enforced site-wide.
- PCI DSS compliance handled by payment providers (no card data touches the server).
- Encrypted secrets via environment variables and a secrets manager.
- Rate limiting on auth and checkout endpoints.
- CSRF and XSS protection.
- Input validation on every endpoint.
- Audit logging for admin actions.
- Regular dependency scanning (Dependabot, Snyk).

11.6 SEO Requirements

- Server-side rendering or static generation for all public pages.
- Structured data (JSON-LD) for products, reviews, and articles.
- Auto-generated sitemap and robots.txt.
- Canonical URLs to prevent duplicate content.
- Open Graph and Twitter Card metadata.

11.7 Performance Optimization

- Target Largest Contentful Paint under 2.5 seconds.
- Image optimisation via Next.js Image or imgix.
- Code splitting and lazy loading.
- Edge caching for product listing and home page.
- Database query optimisation with indexes on common filters.

12. Integrations

Category	Integration
Email	Resend, Postmark, or SendGrid for transactional; Mailchimp or Klaviyo for marketing
CRM	HubSpot or Zoho for wholesale leads
Payments	Stripe, Paystack, Flutterwave, PayPal
Messaging	WhatsApp Business API, Instagram DM
Social	Instagram Shopping, TikTok Shop, Pinterest
AI APIs	OpenAI, Anthropic, ElevenLabs (future voice)
Analytics	Google Analytics 4, Meta Pixel, TikTok Pixel, Hotjar
Shipping	DHL, FedEx, GIG Logistics (Nigeria), Sendcloud
Reviews	Trustpilot or Judge.me
Customer Support	Crisp or Intercom as fallback to AI agent

13. Mobile Responsiveness

13.1 Mobile (320 to 767 pixels)

- Single-column layouts.
- Bottom-anchored navigation.
- Full-screen overlays for filters and menu.
- Sticky "Add to Cart" bar on product pages.
- AI chat as bottom sheet.

13.2 Tablet (768 to 1023 pixels)

- Two-column product grid.
- Sidebar filters collapse into a drawer.
- Hybrid navigation with key items visible.

13.3 Desktop (1024 pixels and above)

- Four-column product grid.
- Persistent filter sidebar on listing pages.
- Multi-column footer.
- AI chat as side panel.

All breakpoints share the same component library, with variants controlled by responsive props.

14. SEO and Marketing

14.1 SEO Structure

- Clean, descriptive URLs (/shop/almond/blush-rose).
- One H1 per page.
- Logical heading hierarchy.
- Schema markup for products, breadcrumbs, FAQ, and articles.
- Internal linking from journal posts to product pages.

14.2 Metadata

Every page must define:

- Title (50 to 60 characters).
- Description (140 to 160 characters).
- Open Graph image (1200 by 630 pixels).
- Twitter card type.
- Canonical URL.

14.3 Blog (Journal) System

- Categories: Trends, Tutorials, Behind the Scenes, Brand Stories.
- Author profiles.
- Related products at the end of each post.
- Newsletter signup embedded in posts.
- Comment system (optional, moderated).

14.4 Marketing Funnels

Funnel	Stages
New Visitor	Exit-intent popup → newsletter signup → first-purchase discount → welcome email series
Abandoned Cart	Email 1 (1 hour) → Email 2 (24 hours) → Email 3 (3 days) with discount
Post-Purchase	Order confirmation → shipping → delivery → review request → repeat-purchase incentive
Win-Back	Inactive 60 days → personalised email → 90 days → final offer

14.5 Analytics Tracking

- Page views, sessions, sources via GA4.
 - Ecommerce events (view item, add to cart, begin checkout, purchase).
 - AI agent interactions logged with anonymised metadata.
 - Heatmaps and session replays via Hotjar on key pages.
-

15. Future Scalability

15.1 Future Features

- Native iOS and Android apps.
- Voice-enabled AI agent.
- AR try-on for nail designs.
- Subscription box (monthly nail drops).
- Influencer and affiliate program with custom dashboards.
- Multi-language storefront (French, Spanish, Portuguese, Arabic).
- Marketplace model for nail technicians and small brands.

15.2 Scalability Considerations

- Stateless backend services behind a load balancer.
- Read replicas for the database as traffic grows.
- CDN for static assets globally.
- Queue-based architecture for emails, AI tasks, and order processing.
- Feature flags for safe rollout of new functionality.

15.3 Expansion Possibilities

- Adjacent product lines: lashes, hair accessories, jewellery.
 - Geographic expansion with localised payment and shipping.
 - White-label storefront for fashion partners.
 - B2B portal for salons and spas.
-

16. Final Development Notes

16.1 Recommended Development Phases

Phase	Scope	Duration Estimate
Phase 1: MVP	Core storefront, product catalog, cart, checkout with one payment provider, basic admin	8 to 10 weeks
Phase 2: AI and Accounts	Full auth, customer dashboard, AI customer service agent, wishlist, reviews	6 to 8 weeks
Phase 3: Growth	Wholesale portal, additional payment providers, marketing automation, journal	4 to 6 weeks
Phase 4: Scale	Mobile app, AR try-on, subscription, multi-language	12 weeks plus

16.2 MVP Recommendation

The MVP should ship with:

- Home, Shop, Product Detail, Cart, Checkout, Account, Help Center.
- Stripe (or Paystack for Nigeria-first launch) plus Apple Pay.
- Basic admin with order and product management.
- A first version of the AI agent limited to product FAQ and order lookup.
- Newsletter capture and transactional email.

Skip in MVP: wholesale portal, full loyalty program, advanced analytics, multi-language, AR features.

16.3 Estimated Complexity

Area	Complexity
Storefront UI	Medium
Cart and Checkout	Medium-High
Payment Integration	Medium
AI Customer Service	High
Admin Dashboard	Medium-High
Wholesale System	Medium
Loyalty and Referrals	Medium

Area	Complexity
Multi-language	High

16.4 Priority Features

In order of priority for launch:

1. Product catalog and detail pages.
2. Cart and checkout with at least one card provider plus Apple Pay.
3. Order confirmation and email receipts.
4. Customer accounts with order history.
5. AI customer service agent (FAQ and order lookup at minimum).
6. Admin dashboard for orders and products.
7. Reviews and ratings.
8. Wishlist.
9. Journal and SEO content.
10. Wholesale inquiry form.

16.5 Open Questions for the Client

Before development starts, the team should confirm with the client:

- Preferred primary market for launch (Nigeria, US, UK, global).
- Initial product range and inventory model (made-to-order or stocked).
- Fulfilment partner and shipping carriers.
- Whether the brand will offer custom or made-to-order designs.
- Budget envelope for AI usage (LLM costs scale with conversation volume).
- Existing assets (logo, brand guide, product photography).

Appendix A: Glossary

Term	Definition
RAG	Retrieval Augmented Generation, a method of grounding AI responses in your own data
LangGraph	A framework for building stateful, multi-agent AI workflows
pgvector	PostgreSQL extension for storing and querying vector embeddings
LCP	Largest Contentful Paint, a Core Web Vital
SSR	Server-Side Rendering
OG	Open Graph, metadata standard for social link previews

Appendix B: Document Control

Field	Value
Document Owner	Eunice Nails Project Lead
Version	1.0
Status	Draft for Review
Next Review	After client feedback

End of Document
